I got a new job :) More of an old job perhaps -- I used to work there before but have been freelancing these past couple of years. Its all good though.

3.03 downgrader finally out -- w00t! I've downgraded my PSP and back up to 3.03 OE-C, and have been playing with the custom waves and such lately. I had hoped to update Lua FileManager but I've been really busy with the new job. That kind of explains the lack of posts too hehe.

I see a few people have linked to my blog, great stuff! I'll be sure to post more often -- but for now I'm just checking in.

Well, that about wraps it up. Meow.
